

Logo update

EW logo modification recommendations

12.02.2019

CURRENT LOGO

3D effect not necessary and dependent on shades of color to be effective

Space between mark and logotype too tight

Kerning is too tight so words blend together at smaller size

Typeface might come off as too masculine

Logo too wide and not flexible for various applications

OPTION 1

Minor updates to logo that address some of the problems and apply the new branding.

Get rid of 3D effect to make it feel more in line with current best practices

Slightly open up the space between mark and logotype to add some breathing space

Open up kerning slightly so logotype integrity is intact at smaller sizes

Use new typeface which is more playful and younger

SIDE-BY-SIDE

OPTION 2

Update the logo to a cleaner, more current version while maintaining the “essence” of the original.

LOGO VARIATIONS

PRIMARY

To be used as the main logo on most brand communication materials.

PRIMARY ALT

Could also be used as main logo instead of the one on left if a more symmetrical option is ideal.

SECONDARY

To be used in scenarios where primary logo is too tall. (i.e. website navigation bar or a pen)

NOTE: Only one primary logo should be selected as the main logo and the other one should be discarded.

Smart header.
